INDEX OF VOLUME XXII

Akcoglu, M. A. and Chacon, R. V. *A local ratio theorem*, 545–552
Arminjon, Paul. *Un théorème de régularité pour une équation différentielle abstraite*, 288–296

Baker, Kirby A. and Hales, Alfred W. *Distributive projective lattices*, 472–475
Ball, Eugene S. *Weak normality and related properties*, 997–1001
Band, Melvin. *On the integral extensions of quadratic forms over local fields*, 297–307
Başgöze, T.; Frank, J. L.; and Keogh, F. R. *On convex univalent functions*, 123–127
Beasley, LeRoy B. *Maximal groups on which the permanent is multiplicative: Corrigendum*, 192
——— *Linear transformations on matrices: The invariance of the third elementary symmetric function*, 746–752
Beem, John K. *Indefinite Finsler spaces and timelike spaces*, 1035–1039
Beidleman, James C. *The influence of generalized Frattini subgroups on the solvability of a finite group*, 41–46
Benabdallah, Khalid and Irwin, John M. *On quasi-essential subgroups of primary abelian groups*, 1176–1184
Berg, I. D. *Extensions of certain maps to automorphisms of m*, 308–316
Biggs, R. G. *A new bound for nil U-rings*, 403–407
Biondi, E.; Divieti, L.; and Guardabassi, G. *Counting paths, circuits, chains, and cycles in graphs: a unified approach*, 22–35
Blumenthal, Robert G. *Maximality in function algebras*, 1002–1004
Borrego, J. T. and DeVun, E. E. *Point-transitive actions by the unit interval*, 255–259
Brannan, D. A.; Clunie, J.; and Kirwan, W. E. *Coefficient estimates for a class of star-like functions*, 476–485
Bressler, D. W. and Cayford, A. H. *Compositions of set operations*, 227–234
Burroughs, John E. and Schafer, James A. *Subgroups of conjugate classes in extensions*, 773–783

Cayford, A. H. and Bressler, D. W. *Compositions of set operations*, 227–234
Chacon, R. V. and Akcoglu, M. A. *A local ratio theorem*, 545–552
Chew, Kim Lin and Lawn, Sherry. *Residually finite rings*, 92–101
Christoph, Francis T., Jr. *Ideal extensions of topological semigroups*, 1168–1175
Clements, G. F. *On existence of distinct representative sets for subsets of a finite set*, 1284–1292
Clements, John C. *Existence theorems for some non-linear equations of evolution*, 726–745
Clunie, J.; Kirwan, W. E.; and Brannan, D. A. *Coefficient estimates for a class of star-like functions*, 476–485
Cofman, Judita. *On Baer involutions of finite projective planes*, 878–880
Cohn, Richard M. *A difference-differential basis theorem*, 1224–1237
Coleman, Courtney. *Growth and decay estimates near non-elementary stationary points*, 1156–1167
Coleman, D. B. *On group rings*, 249–254
Corson, H. H. and Glicksberg, I. *Compactness in* Hom(G, H), 164–170
Crotty, J. M. and Petty, C. M. *Characterizations of spherical neighbourhoods*, 431–435
Cutler, Doyle O. and Dubois, Paul F. *A generalization of final rank of primary Abelian groups*, 1118–1122

Dark, Rex and Rhemtulla, Akbar H. *On R_0-closed classes, and finitely generated groups*, 176–184
Davis, Elwyn H. *Incidence systems associated with non-planar nearfields*, 939–952
Deliyannis, Platon C. *Group representations and cardinal algebras*, 759–772
Derzko, N. A. *Gentle perturbations of $i\,d/dx$ with application to $-d^2/dx^2 + q$*, 1055–1070
DeVun, E. E. and Borrego, J. T. *Point-transitive actions by the unit interval*, 255–259
Divieti, L.; Guardabassi, G.; and Biondi, E. *Counting paths, circuits, chains, and cycles in graphs: a unified approach*, 22–35
Dlab, Vlastimil. *On a class of perfect rings*, 822–826

Dubois, Paul F. and Cutler, Doyle O. *A generalization of final rank of primary Abelian groups* 1118–1122
Duff, G. F. D. *Integral inequalities for equimeasurable rearrangements*, 408–430

Edelstein, Michael. *On the representation of mappings of compact metrizable spaces as restrictions of linear transformations*, 372–375
——— *Lines and hyperplanes associated with families of closed and bounded sets in conjugate Banach spaces*, 933–938
Eenigenburg, Paul. *On the radius of curvature for convex analytic functions*, 486–491

Fine, N. J. and Maserick, P. H. *On the simplex of completely monotonic functions on a commutative semigroup*, 317–326
Fisher, Joe W. *On the nilpotency of nil subrings*, 1211–1216
Flatto, Leopold and Wiener, Sister Margaret M. *Regular polytopes and harmonic polynomials*, 7–21
Ford, Charles. *Some results of the Schur index of a representation of a finite group*, 626–640
Fox, R. H. *Metacyclic invariants of knots and links*, 193–201
Frank, J. L.; Keogh, F. R.; and Başgöze, T. *On convex univalent functions*, 123–127
Franklin, S. P. and Kohli, J. K. *On open extensions of maps*, 691–696

Garfinkel, Gerald and Orzech, Morris. *Galois extensions as modules over the group ring*, 242–248
Gasper, George. *Linearization of the product of Jacobi polynomials.* I, 171–175
——— *Linearization of the product of Jacobi polynomials.* II, 582–593
Gauthier, P. M. *Cercles de remplissage and asymptotic behaviour along circuitous paths*, 389–393
——— *The maximum modulus of normal meromorphic functions and applications to value distribution*, 803–814
Geramita, Anthony and Lissner, David. *Remarks on OP and Towber rings*, 1109–1117
Gilbert, William J. *Suspension of the Lusternik-Schnirelmann category*, 1129–1132
Glicksberg, I. and Corson, H. H. *Compactness in* Hom(G, H), 164–170
Goethals, J. M. and Seidel, J. J. *Strongly regular graphs derived from combinatorial designs*, 597–614
Götzky, K. Martin. *Products of reflections in an affine Moufang plane*, 666–673
Guardabassi, G.; Biondi, E.; and Divieti, L. *Counting paths, circuits, chains, and cycles in graphs: a unified approach*, 22–35
Gupta, Narain. *On metanilpotent varieties of groups*, 875–877

Hales, Alfred W. and Baker, Kirby A. *Distributive projective lattices*, 472–475
Hamara, Oma and Wakae, Masami. *A mapping problem and J_p-index.* I, 705–712
——— *A mapping problem and J_p-index.* II, 713–718
Hanani, Haim. *On balanced incomplete block designs with large number of elements*, 61–65
Hardie, K. A. *Homotopy of natural transformations*, 332–341
Heath, Philip R. *Induced homotopy equivalences on mapping spaces and duality*, 697–700
Henniger, J. *Functions of bounded mean square, and generalized Fourier-Stieltjes transforms*, 1016–1034
Hestenes, Marshall D. *Singer groups*, 492–513
Hilton, P. J. and Wu, Y.-C. *On the addition of relations in an abelian category*, 66–74
Hursch, J. L., Jr. *Screening properties of the subbase of all closed connected subsets of a connectedly generated space*, 681–685
Hursey, R. J., Jr. and Rhemtulla, A. H. *Ordered groups satisfying the maximal condition locally*, 753–758

Iden, Oddvar. *Remark to a theorem due to R. Sandler*, 518
Irwin, John M. and Benaebdallah, Khalid. *On quasi-essential subgroups of primary abelian groups*, 1176–1184
Irwin, John M. and O'Neill, John D. *On direct products of Abelian groups*, 525–544
Isaacs, I. M. *Systems of equations and generalized characters in groups*, 1040–1046
Izumi, Masako and Izumi, Shin-ichi. *Localization problem of the absolute Riesz and absolute Nörlund summabilities of Fourier series*, 615–625
Izumi, Shin-ichi and Izumi, Masako. *Localization problem of the absolute Riesz and absolute Nörlund summabilities of Fourier series*, 615–625

Jaco, William. *Surfaces embedded in $M^3 \times S^1$*, 553–568
Johnson, D. L. *Minimal relations for certain wreath products of groups*, 1005–1009
Johnson, E. W. and Johnson, J. A. *M-primary elements of a local Noether lattice*, 327–331
Johnson, E. W.; Johnson, J. A.; and Lediaev, J. P. *A structural approach to Noether lattices*, 657–665
Johnson, J. A. and Johnson, E. W. *M-primary elements of a local Noether lattice*, 327–331
Johnson, J. A.; Lediaev, J. P.; and Johnson, E. W. *A structural approach to Noether lattices*, 657–665

Kallman, Robert R. *A problem of Gelfand on rings of operators and dynamical systems*, 514–517
Kantor, William M. *Elations of designs*, 897–904
Kaufman, Robert. *Brownian motion and dimension of perfect sets*, 674–680
Keimel, Klaus. *Algèbres commutatives engendrées par leurs éléments idempotents*, 1071–1078
Keogh, F. R.; Başgöze, T.; and Frank, J. L. *On convex univalent functions*, 123–127
King, R. C. *The dimensions of irreducible representations of linear groups*, 436–448
Kirwan, W. E.; Brannan, D. A.; and Clunie, J. *Coefficient estimates for a class of star-like functions*, 476–485
Kleinfeld, Margaret Humm; Kosier, Frank; and Kleinfeld, Erwin. *A generalization of commutative and alternative rings*, 348–362
Kleinfeld, Erwin; Kleinfeld, Margaret Humm; and Kosier, Frank. *A generalization of commutative and alternative rings*, 348–362
Kohli, J. K. and Franklin, S. P. *On open extensions of maps*, 691–696
Körle, H.-H. *On absolute summability by Riesz and generalized Cesàro means.* I, 202–208
——— *On absolute summability by Riesz and generalized Cesàro means.* II, 209–218
Kosier, Frank; Kleinfeld, Erwin; and Kleinfeld, Margaret Humm. *A generalization of commutative and alternative rings*, 348–362
Kuan, Wei-Eihn. *On the hyperplane sections through two given points of an algebraic variety*, 128–133
——— *A note on a generic hyperplane section of an algebraic variety*, 1047–1054
Kubota, Yôto. *A characterization of the approximately continuous Denjoy integral*, 219–226
Kumpera, A. *Equivalence locale des structures de codimension un*, 1123–1128
Kwon, Y. K. and Sario, L. *A maximum principle for bounded harmonic functions on Riemannian spaces*, 847–854
——— *A maximum principle for Dirichlet-finite harmonic functions on Riemannian spaces*, 855–862

Lachlan, A. H. *Initial segments of many-one degrees*, 75–85
Lakser, H. *Normal and canonical representations in free products of lattices*, 394–402
Lallement, Gérard and Petrich, Mario. *Extensions of a Brandt semigroup by another*, 974–983
Lawn, Sherry and Chew, Kim Lin. *Residually finite rings*, 92–101
Lediaev, J. P.; Johnson, E. W.; and Johnson, J. A. *A structural approach to Noether lattices*, 657–665
Lee, K. B. *Equational classes of distributive pseudo-complemented lattices*, 881–891
Lick, Don R. and White, Arthur T. *k-degenerate graphs*, 1082–1096
Lissner, David and Geramita, Anthony. *Remarks on OP and Tower rings*, 1109–1117
Liu, Ming-Chit. *On a theorem of Heilbronn concerning the fractional part of θn^2*, 784–788
Lorch, Lee; Muldoon, M. E.; and Szego, Peter. *Higher monotonicity properties of certain Sturm-Liouville functions.* III, 1238–1265

Manvel, Bennet. *Reconstruction of trees*, 55–60
Maserick, P. H. and Fine, N. J. *On the simplex of completely monotonic functions on a commutative semigroup*, 317–326
McArthur, William G. *Hewitt realcompactifications of products*, 645–656
McCool, James. *Embedding theorems for countable groups*, 827–835
——— *Unsolvable problems in groups with solvable word problem*, 836–838
McMullen, P. and Shephard, G. C. *Polytopes with an axis of symmetry*, 265–287
Mendelsohn, N. S. *A theorem of Steiner systems*, 1010–1015
Meyers, W. E. *Montel algebras on the plane*, 116–122
Mizel, Victor J. *Characterization of non-linear transformations possessing kernels*, 449–471
Moody, Robert V. *Simple quotients of Euclidean Lie algebras*, 839–846
Moore, M. J. *Fixed points of automorphisms of compact Riemann surfaces*, 922–932

Morgan, Raymond V., Jr. *On a generalization of alternative rings*, 953–966
Muldoon, M. E.; Szego, Peter; and Lorch, Lee. *Higher monotonicity properties of certain Sturm-Liouville functions*. III, 1238–1265

Narayana Rao, M. L. *Conjecture of D. R. Hughes extended to generalized André planes*, 701–704
Ngô van Quê. *On the classification of Lie pseudo-algebras*, 905–915

O'Neill, John D. and Irwin, John M. *On direct products of Abelian groups*, 525–544
Orlik, Peter. *On the Arf invariant of an involution*, 519–524
Ortiz, Augusto H. *A construction in general radical theory*, 1097–1100
Orzech, Morris and Garfinkel, Gerald. *Galois extensions as modules over the group ring*, 242–248

Patty, C. W. *Homology of deleted products of contractible 2-dimensional polyhedra*. III, 1217–1223
Pedersen, Franklin D. *Implications between conditions on l-groups*, 1–6
Perles, M. A. and Sallee, G. T. *Cell complexes, valuations, and the Euler relation*, 235–241
Petrich, Mario and Lallement, Gérard. *Extensions of a Brandt semigroup by another*, 974–983
Petty, C. M. and Crotty, J. M. *Characterizations of spherical neighbourhoods*, 431–435
Pfeffer, W. F. *Singular integrals are Perron integrals of a certain type*, 260–264
Plemmons, R. J. *On a conjecture concerning semigroup homomorphisms*, 641–644
Price, J. F. *On positive definite functions over a locally compact group*, 892–896
Putnam, C. R. *The spectra of semi-normal singular integral operators*, 134–150

Quê, Ngô van. *See* Ngô van Quê

Raghavarao, D.; Tharthare, S. K.; and Shrikhande, S. S. *Non-existence of some unsymmetrical partially balanced incomplete block designs: Corrigendum*, 191
Rao, M. L. Narayana. *See* Narayana Rao, M. L.
Raphael, R. M. *Algebraic extensions of commutative regular rings*, 1133–1155
Read, R. C. and Wright, E. M. *Coloured graphs: A correction and extension*, 594–596
Rhemtulla, Akbar H. and Dark, Rex. *On R_0-closed classes, and finitely generated groups*, 176–184
Rhemtulla, A. H. and Hursey, R. J., Jr. *Ordered groups satisfying the maximal condition locally*, 753–758
Rider, Daniel. *Central idempotent measures on unitary groups*, 719–725
Rigby, J. F. *Axioms for absolute geometry*. III, 185–190
Ruckle, William H. *An abstract concept of the sum of a numerical series*, 863–874

Sahney, Badri N. *On the Nørlund summability of a class of Fourier series*, 86–91
Sallee, G. T. and Perles, M. A. *Cell complexes, valuations, and the Euler relation*, 235–241
Sario, L. and Kwon, Y. K. *A maximum principle for bounded harmonic functions on Riemannian spaces*, 847–854
——— *A maximum principle for Dirichlet-finite harmonic functions on Riemannian spaces*, 855–862
Schafer, James A. and Burroughs, John E. *Subgroups of conjugate classes in extensions*, 773–783
Seidel, J. J. and Goethals, J. M. *Strongly regular graphs derived from combinatorial designs*, 597–614
Sentilles, F. Dennis. *Semigroups of operators in $C(S)$*, 47–54
Shapiro, H. L. *More on extending continuous pseudometrics*, 984–993
Shatz, Stephen S. *Finite subschemes of group schemes*, 1079–1081
Shephard, G. C. and McMullen, P. *Polytopes with an axis of symmetry*, 265–287
Sherman, Malcolm J. *Eigenfunctions of operator-valued analytic functions*, 686–690
Shrikhande, S. S.; Raghavarao, D.; and Tharthare, S. K. *Non-existence of some unsymmetrical partially balanced incomplete block designs: Corrigendum*, 191
Singh, K. *On the vanishing of a (G, σ) product in a (G, σ) space*, 363–371
Singh, Surjeet and Wasan, Kamlesh. *Commutative self-injective rings*, 1101–1108
Stampfli, J. G. *A spectral theory for duality systems of operators on a Banach space*, 994–996
Stevenson, Frederick W. *The collineation group of the Veblen-Wedderburn plane of order nine*, 967–973
Streit, Franz. *On multiple integral geometric integrals and their applications to probability theory*, 151–163

Summers, W. H. *Full-completeness in weighted spaces*, 1196–1207
Szego, Peter; Lorch, Lee; and Muldoon, M. E. *Higher monotonicity properties of certain Sturm-Liouville functions*. III, 1238–1265

Taylor, B. A. and Williams, D. L. *Ideals in rings of analytic functions with smooth boundary values*, 1266–1283
Tharthare, S. K.; Shrikhande, S. S.; and Raghavarao, D. *Non-existence of some unsymmetrical partially balanced incomplete block designs: Corrigendum*, 191
Thomason, S. K. *Sublattices and initial segments of the degrees of unsolvability*, 569–581
Timourian, J. G. *Maps with locally flat singular sets*, 916–921
Turgeon, J. *On the rank numbers of an arc*, 789–802

van Quê, Ngô. *See* Ngô van Quê
Vaughan, J. E. *Perfect mappings and spaces of countable type*, 1208–1210

Wakae, Masami and Hamara, Oma. *A mapping problem and J_p-index*. I, 705–712
——— *A mapping problem and J_p-index*. II, 713–718
Wamsley, J. W. *A class of three-generator, three-relation, finite groups*, 36–40
Ward, D. J. *A set of plane measure zero containing all finite polygonal arcs*, 815–821
Wasan, Kamlesh and Singh, Surjeet. *Commutative self-injective rings*, 1101–1108
Wells, James. *On the zeros of functions with derivatives in H_1 and H_∞*, 342–347
White, Arthur T. and Lick, Don R. *k-degenerate graphs*, 1082–1096
Wichman, Michael. *The width of a module*, 102–115
Wiener, Sister Margaret M. and Flatto, Leopold. *Regular polytopes and harmonic polynomials*, 7–21
Williams, D. L. and Taylor, B. A. *Ideals in rings of analytic functions with smooth boundary values*, 1266–1283
Wright, E. M. and Read, R. C. *Coloured graphs: A correction and extension*, 594–596
Wu, Y.-C. and Hilton, P. J. *On the addition of relations in an abelian category*, 66–74

Yano, Kentaro. *Integral formulas for submanifolds and their applications*, 376–388
Yap, H. P. *Some addition theorems of group theory with applications to graph theory*, 1185–1195
